

# INTRAOcular

Our intraocular lens (IOL) material range encompasses a selection of hydrophilic and hydrophobic products

## HYDROPHILIC

### CI26

- Easy folding and injection characteristics
- Smooth and controlled unfolding rate
- Available in Clear and Yellow

### CI25

- 25% water content
- Controlled unfolding rate
- Available in Clear and Yellow

### MICS22

- Hydrophilic acrylic material customised for micro insertion IOLs
- 1.8mm incision “in the bag”
- 1.4mm “wound assisted”
- Available in Clear and Yellow

## HYDROPHOBIC

### HI56<sup>2SF</sup>

- Semi-finished disc with a neutral aspheric optic
- High refractive index
- Fast unfolding rate
- Available in Clear

### PMMA

- Available in Clear and Yellow
